

**ABSTRACT**

The present invention provides e-mail communication management system for generating an e-mail user interface on a display device such that the e-mail user interface implements e-mail messaging for root e-mail address where a user can generate a suffix in order to associate each suffix e-mail address comprising a domain, user and suffix name with an existing directory at the e-mail user interface. The system provides the user with a plurality of suffix selections to accept, reject or otherwise sort the different e-mail messages.
